Advanced Endpoint Security

Powered by ThreatLocker

The Challenge

Your endpoints are constantly at risk—from malicious downloads, unauthorized applications, and excessive user privileges that open the door to cyber threats.

Traditional antivirus tools alone can't stop modern attacks that exploit legitimate software or human error. To stay secure, you need visibility, control, and the ability to decide exactly what can and cannot run in your environment.

The Solution: Advanced Endpoint Security from Sourcepass

Sourcepass delivers a proactive approach to endpoint protection through ThreatLocker, a powerful suite that puts control back in your hands.

This solution combines Application Allowlisting, Ring Fencing, and Endpoint Elevation Control to stop unauthorized activity before it starts—without slowing down your operations.

How it Works

Application Allowlisting
Only allows the software you need and blocks other unwanted and malicious software from running

Ring Fencing
Creates boundaries around approved applications to dictate how they interact with other applications.

Endpoint Control
Enables users to run specific applications as a local administrator, even when they do not have local admin privileges

What You Gain

- **Enhanced Security Posture:** Reduce risk across your environment by blocking unauthorized software, isolating applications, and limiting privileged access.

- **Compliance and Audit Readiness:** Gain full visibility into application usage and user activity, helping you meet compliance requirements and maintain a verifiable record of control.

- **Operational Efficiency:** Automate application management and privilege control to free your IT team from manual oversight and repetitive tasks.

- **Reduced Downtime and Cost:** Prevent system failures, data loss, and breach-related expenses by controlling what runs—and how it runs—across your endpoints.

Advanced Endpoint Security

Powered by ThreatLocker

Why Sourcepass?

Sourcepass combines best-in-class security technology with proactive management and expert support.

Our team integrates ThreatLocker into your environment, monitors its performance, and ensures your security strategy evolves with your business.
Through the Quest™ platform, you gain complete transparency into your cybersecurity operations, from device activity to automated response.

Take Control of Your Endpoint Security

Stop reacting to threats and start preventing them.

Contact Sourcepass to schedule a security assessment and learn how Advanced Endpoint Security can strengthen your protection, simplify compliance, and reduce your risk.
