

Cloud Backup & Data Protection

Keep Your Business Running with Secure, Reliable Backup and Recovery

Safeguard Your Data, Secure Your Operations

Your business runs on data. Whether it's client records, project files, or operational systems, losing access to that information can halt productivity and damage your reputation. Data loss can happen through cyberattacks, hardware failure, or simple human error—and the cost of downtime adds up quickly.

Without a comprehensive backup and recovery strategy, businesses risk losing critical information, revenue, and customer trust.

The Solution: Managed Cloud Backup & Disaster Recovery

Sourcepass delivers fully managed backup and disaster recovery **powered by Acronis**, a leading global platform for data protection. We help businesses of all sizes protect, store, and recover data seamlessly—across on-premises, hybrid, and cloud environments.

Our solution combines local, offsite, and cloud backups with integrated cybersecurity features to prevent data loss and enable rapid recovery when disruptions occur.

How It Works

1. Local Backup

Data is automatically backed up on-premises every hour. These snapshots allow for quick recovery of individual files or full systems without needing to access the cloud.

2. Cloud Backup & Retention

Daily encrypted backups are securely stored in the cloud and retained for one year by default. Retention policies can be customized to meet your business or compliance requirements.

3. Disaster Recovery

If your systems experience downtime or failure, Sourcepass can quickly restore operations by spinning up your environment in the cloud. This ensures continuity with minimal disruption.

4. Integrated Security

All backup data is encrypted in transit and at rest, and advanced anti-malware and ransomware defenses protect against evolving threats.

Cloud Backup & Data Protection

Keep Your Business Running with Secure, Reliable Backup and Recovery

Business Benefits

- **Comprehensive Data Protection:** Protect critical files, servers, and cloud applications—including Microsoft 365 and Google Workspace—against loss, theft, or corruption.
- **Rapid Recovery:** Restore data, applications, or entire systems in minutes to minimize downtime and maintain business continuity.
- **Built-In Cybersecurity:** Advanced threat detection, encryption, and ransomware protection ensure your backups are secure from cyberattacks.
- **Flexible Retention & Compliance:** Customize backup frequency, retention policies, and storage locations to meet business and industry-specific regulations.
- **Proactive Management & Support:** With 24/7 monitoring and expert support from Sourcepass, you can trust that your backups are always running and recoverable.

Why Sourcepass?

Sourcepass combines Acronis' industry-leading technology with hands-on expertise to deliver a reliable and secure data protection experience. Our team manages the full lifecycle—planning, deployment, monitoring, and recovery—so you can focus on your business, not your backups.

As your strategic IT partner, Sourcepass ensures your business remains resilient, compliant, and ready to recover from any disruption.

Safeguard Your Data, Secure Your Operations

Ensure your data is secure, recoverable, and always available.

Partner with Sourcepass for managed backup and disaster recovery powered by Acronis.
