

CYBERSECURITY SERVICES

Cybersecurity Awareness Training

Powered by KnowBe4

Elevate Awareness, Eliminate Threats

Cybersecurity awareness training is crucial to educating your employees against social engineering attacks and may be required to meet compliance regulations.

Sourcepass GOV provides comprehensive cybersecurity awareness training services, including platform setup, user integration, training campaign development, email allowlisting support, quarterly training implementation, monitoring, and campaign adjustments.

Key Benefits

- ✓ Real-world phishing simulations
- ✓ Social Engineering Indicators (SEI)
- ✓ Customizable Campaigns
- ✓ Proactive risk reduction
- ✓ Measurable security improvements
- ✓ Behavioral risk insights

How It Works

- 1 Employees go through interactive, on-demand training to learn about cybersecurity threats and best practices.
- 2 Simulated phishing emails are sent to employees to test their knowledge from the training. Failing to identify a phishing attack results in more training.
- 3 Sourcepass reviews reports with you to track employee security awareness and make recommendations for additional training.

What We Do

Kick-Off & Build

Sourcepass GOV builds out the training platform, creates a training plan, sets up the campaigns, and schedules them with set completion dates.

Continuous Monitoring

Our experienced security analysts continuously monitor and track progress of users and groups to optimize the security awareness training program, making adjustments as applicable.

Campaign Reviews

Sourcepass GOV schedules quarterly reviews to assess campaign results and risks at all levels, helping you make informed decisions to enhance security.
